

Running X Server on Linux

If your machine runs Gnome or KDE as the login manager on your Linux machine, your machine has already X server installed

Connecting to any Linux System:

- 1) Open a shell terminal like **"xterm"**

Note: It is important to put the **-X** option in the SSH or the X11 forwarding will not be enable.

Note: If prompted to accept the ssh-rsa key from the remote host, type "yes"
Successful login, at this point you can run matlab, R, xterm and so on ...

```
[1] ~> $ ssh -X johndoe@10.91.32.127
```
